

Performance Wear Components

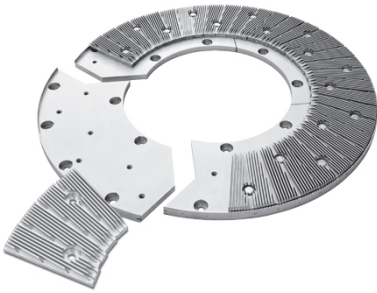

Pressure Screen Cylinders

AFT offers the widest selection of cylinders in the industry for all screen brands, models and sizes.

Pressure Screen Rotors

Award winning energy smart rotors and replacement rotors for virtually all screen makes and models.

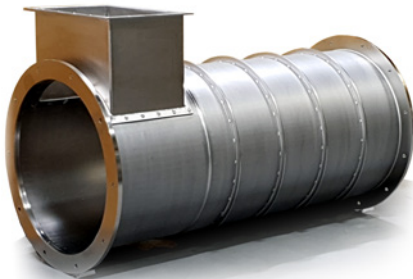

Refiner Disc Plates

Finebar customized patterns last up to 3x longer for ease of maintenance and less downtime.

Refiner Conical Fillings

Customizable filling designs for each specific application, including ultra low intensity patterns.

Screw Press Baskets

Replacement cylinders and plates for most screw press designs.

Drilled Cylinders and Plates

Global drilling capability and one of the largest drilling capacities of the paper industry in both volume and size used for plates and cylinders.

EB Drilled Cylinders

Electron-beam technology ensures high precision and accuracy for high performance filtering applications.

AFT Equipment Services

Process Audits

Process audits for mill site performance evaluation of screen and refiner systems.

Mechanical Audits

Preventative or failure root cause inspections for screens, refiners, and degassers.

Rotor Refurbishing and Converting

Reverse rotor wear with repairs, refurbishing, or an upgrade to a newer design when applicable.

Screen Cylinder Rechroming

AFT's DuraShield™ chroming can extend screen cylinder life 20% longer than the competition.

Pressure Screen Refurbishing

Factory evaluation of screen - including cylinder, rotor, housing fit and sealing. Report on repair or full rebuild options for selection that best fits mill needs.

Shaft Package Reconditioning

Factory reconditioning or replacement of rotating shaft assemblies.

POMp Degasser Mill Service

In mill service, recommended every 5 years, to maintain seals and wear elements of POMp degasser.

EB Drilled Cylinder Wash

A thorough cleaning process to reverse fine hole plugging and return EB drilled cylinders to like-new operation.
